

KMB Conveyor

High-speed Vacuum Base

The KMB is a simple vacuum conveyor with a conventional cabinet style base. It is intended for simplex imaging from the top. It is an economical unit that can be outfitted with an integral feeder rack and heat resistant dryer station. It has a standard working width of 20" and is five feet in overall length (without feeder or dryer station). It is intended for stand alone use. It is ideal for basic addressing applications.

For Basic:
Imaging
Tipping
Labeling
Inspection

Shown with friction feeder on adjustable rack
